DETAILED ACTION

Specification

1. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: the specification does not appear to disclose that the ribs are "diagonally" attached to the top surface of the seat.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schofield (5,163,692) in view of Iverson '685.

Schofield discloses a power end seal (capable of being used in pump) comprising a u-shaped body 11 (e.g. Figs. 4 or 9) having an inner wall portion 32, an outer wall portion 30, and seat12. The seal has a u-shaped open channel 28. The seal has an inner diameter composite dynamic seal 18/22 and an outer diameter static seal 20. The composite wear surface is comprised of bronze or carbon filled PTFE. Schofield does not disclose plural ribs in the channel. Iverson teaches a seal having plural ribs in a groove connected to surfaces of the lips of the seal. Iverson teaches that the ribs are an improvement over prior art expanders (i.e. Schofield's spring 14) and accommodates a large range of expansion and compression (see 1:28-42 and 65-66). Therefore, it would have been obvious for one of ordinary skill in the art at the

Art Unit: 3673

time the invention was made to use the ribs taught by Iverson to improve the seal and accommodate large expansion/compression ranges. Regarding claim 7, the selection of a known material based on its suitability for its intended use is not considered inventive. See In re Leshin, 125 USPQ 416 (CCPA 1960). It would have been obvious for one of ordinary skill in the art at the time the invention was made to make the composite surface from aramid fiber filled HNBR.

Response to Arguments

4. Applicant's arguments with respect to claims 1-7 have been considered but are moot in view of the new ground(s) of rejection.

Gorman also discloses the seal as claimed but lacks the composite lip. Schofield and Balsells teach the use of a composite inner diameter lip. Also see Wheeler.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alison K. Pickard whose telephone number is 571-272-7062. The examiner can normally be reached on M-F (10-7:30), with alternate Friday's off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Heather Shackelford can be reached on 571-272-7049. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
